

Mehmet Arif Emre Şen

Software Engineer

Work Experience

Software Engineer (Hybrid)

MAY 2023 - Present (3 years)

Kuehne+Nagel, Tallinn, Estonia

Document Output Solutions

Building end-to-end document processing system handling millions of documents for physical print, PDF email distribution, and archiving. Developing Java-based data flows using Apache NiFi and Spring Boot in a small, high-ownership team of 3 developers. Leading migration from on-prem OpenShift to AWS as part of company-wide modernization. First team to onboard the new internal developer platform (IDP) built with Crossplane and Terraform, providing early feedback to the platform team. Integrating AI coding agents (Kiro) into the development workflow.

Operational Data Store Service

Built a data pipeline service that captured changes from Oracle OTM via CDC (StreamSets), enriched, deduplicated, and published shipment data to Kafka for downstream consumer applications enabling customers to track and manage their shipments in real time. Developed a multi-module Spring Boot system (event listener, processor, publisher) with PostgreSQL, and owned the full CI/CD lifecycle using Jenkins, ArgoCD, and Gradle.

Inventory

Full-stack inventory tracking application using Spring Boot and Angular. Led the containerization effort migrating from VMs to OpenShift/Kubernetes, set up Jenkins CI/CD pipelines on OpenShift, enabled SSO authentication using SAML, and integrated Kafka for asynchronous data consumption.

Software Engineer (Remote)

MAR 2021 - MAR 2023 (2 years)

OBSS Technology, Antalya, Türkiye

Witwiser (<https://witwiser.io>)

Full-stack developer on a SaaS online assessment and remote proctoring platform used by major universities (ITU, Ankara University), enterprises (L'Oréal, LC Waikiki), and government institutions. Built assessment features end-to-end from React UI to Spring Boot GraphQL APIs. Supported Node.js backend and proctoring services. Worked in a small startup-style team of 4-5 developers within OBSS. Tech stack included Liquibase, MySQL, Kafka, and AWS (SES, SNS, SQS).

Istanbul Finance Center Portal (<https://www.ifm.gov.tr>)

Core backend developer from day zero to delivery on a turnkey government project for Turkey's Istanbul Financial Center — a global finance hub serving investors and fintech companies. Designed and built the full backend using Spring Boot RESTful APIs for a React client, implemented JWT authentication, managed MySQL with Flyway migrations, and handled async messaging with RabbitMQ. Set up monitoring with Sentry and Kibana.

OBSS Turnkey Project: Fintechub Portal

Full-stack developer from day zero on a fintech portal for the Presidency of the Republic of Turkey Finance Office, connecting investors with startups. Helped design the architecture, built Spring Boot RESTful APIs and React components, implemented Keycloak authentication, integrated Elasticsearch for advanced search, and set up RabbitMQ messaging. Managed MySQL databases with Sentry and Kibana for monitoring.

R & D Software Engineer

JUL 2018 - AUG 2020 (2 years)

Cantekgroup, Antalya, Türkiye

Redesigned a legacy on-prem system into a modern Spring Boot microservices platform from scratch for a TUBITAK-funded R&D project, in a small team. The system provided Industrial Control (ICS) and Early Warning (EWS) for Cantek's cold storage warehouses and Farminova's vertical plant factories — enabling real-time monitoring of temperature, humidity, and atmospheric conditions to prevent costly product loss. Designed the full architecture from scratch: Keycloak (OAuth 2.0) for authentication, Eureka for service discovery, Zuul Gateway for API routing, RabbitMQ for IoT device communication, PostgreSQL and Cassandra for storage, and Jenkins with JFrog Artifactory for CI/CD.

Software Developer (Part-Time)

AUG 2016 - JUL 2018 (2 years)

Akdeniz University IT, Antalya, Türkiye

Developed Java web apps using Spring MVC, enabling database communication via RESTful services. Compiled and deployed apps using Maven, SVN, Jenkins, and Tomcat. Designed UI components with HTML, CSS, and jQuery for a computer-based assessment system.

Education

Computer Science Engineering - Bachelor's Degree

2015 - 2019

Akdeniz University, Antalya, Türkiye

ABOUT ME

Software Engineer with 8+ years of experience building scalable backend systems with Java and Spring Boot. Proven track record across enterprise logistics, fintech, government, and IoT domains. Experienced in designing microservices architectures, CI/CD pipelines, and event-driven systems from scratch.

TECHNICAL SKILLS

Backend: Java, Spring Boot, Spring Data, Hibernate

RDBMS: MySQL, PostgreSQL

NoSQL: Cassandra, Elasticsearch

Security: OAuth 2.0, Keycloak, SAML, JWT

Messaging: Kafka, RabbitMQ

Build Tools: Maven, Gradle

CI/CD: Jenkins, Kubernetes, OpenShift, ArgoCD, GitLab CI/CD

DevOps & Cloud: Docker, Terraform, Crossplane, AWS

Frontend: React, Angular

Other: Apache NiFi, GraphQL, MCP

LANGUAGE

Turkish: Native

English: Professional
